Dear Ms. DiDonato:

On behalf of Precision National Plating Services, Inc. (Precision), Arcadis U.S., Inc. (Arcadis) is submitting this progress report to summarize the activities completed between October 1, 2023 and December 31, 2023. This progress report is being submitted in accordance with Section 8.7 of the Administrative Settlement Agreement and Order on Consent (AS) for Removal Response Action (Docket No. CERC-03-2012-0031DC).

### **1. Response actions completed and the actions that have been taken toward achieving compliance with the Settlement Agreement:**

#### **General**

Precision and Arcadis worked closely with the U.S. Environmental Protection Agency (U.S. EPA) from October through December 2023 to do the following:

- Precision performed semiannual groundwater, residential well, and seep monitoring in October 2023 as approved in the RAP.
- Precision performed general site maintenance activities.
- Precision also provided the U.S. EPA and PADEP with available sampling information.

#### **Ongoing Administrative Settlement (AS) Activities**

##### Seep Remediation

- Precision continued the operation of the Seep Shed treatment system.

- The influent and effluent of the Seep Shed Treatment System were sampled on October 26, 2023, for hexavalent chromium and total chromium. The midpoints between the resin beds of the system also were sampled. At the time of sampling, the influent pH was 7.04 su and the temperature was 12.26° C.
- On October 26, 2023, the flow totalizer reading for the Seep Shed Treatment System was 7,964,750 gallons.
- The influent and effluent of the Seep Shed Treatment System were sampled on November 17, 2023, for hexavalent chromium and total chromium. The midpoints between the resin beds of the system were also sampled for hexavalent and total chromium. At the time of sampling, the influent pH was 6.40 su and the temperature was 25.30° C.
- On November 17, 2023, the Seep Shed flow totalizer reading was 7,969,444 gallons.
- The influent and effluent of the Seep Shed Treatment System were sampled on December 15, 2023, for hexavalent chromium and total chromium. The midpoints between the resin beds of the system were also sampled for hexavalent and total chromium. At the time of sampling, the influent pH was 7.12 su and the temperature was 9.97° C.
- On December 15, 2023, the flow totalizer reading for the Seep Shed Treatment System was 7,976,736 gallons.

#### Lagoon Assessment/Remediation Activities

- Precision continued the operation of the Lagoon Treatment System.
- The influent and system effluent of the Lagoon Treatment System were sampled on October 26, 2023, for hexavalent chromium and TAL metals. The effluent of the lead resin bed was also sampled for hexavalent chromium and total chromium. The pH of the lagoon system influent at the time of sampling was 7.11 su and the temperature was 12.79° C.
- By October 26, 2023, the total volume treated by the Lagoon Treatment System was approximately 41,716,877 gallons.
- The influent and system effluent of the Lagoon Treatment System were sampled on November 17 2023, for hexavalent chromium and TAL metals. The effluent of the lead resin bed was also sampled for hexavalent chromium and total chromium. The pH of the lagoon system influent at the time of sampling was 6.32 su and the temperature was 27.5° C.
- By November 17, 2023, the total volume treated by the Lagoon Treatment System was 41,818,060 gallons.
- The influent and system effluent of the Lagoon Treatment System were sampled on December 15, 2023, for hexavalent chromium and TAL metals. The effluent of the lead resin bed was also

sampled for hexavalent chromium and total chromium. The pH of the lagoon system influent at the time of sampling was 7.07 su and the temperature was 10.3° C.

- By December 15, 2023, the total volume treated by the Lagoon Treatment System was approximately 42,523,711 gallons.

#### Semiannual Groundwater Monitoring

- As approved, routine monitoring samples were collected from monitoring wells and seeps on and near the Precision site in October 2023. Samples were also collected from the two residential wells located north of the Precision site. Samples were analyzed for hexavalent chromium and total chromium. Analytical results were received from TestAmerica Laboratories and validated. Summaries of the data are attached.
- Based on the request from Pennsylvania Department of Environmental Protection, we have also included a current site map and historical monitoring summary data tables for the locations sampled during 2023 semiannual groundwater monitoring events.

#### Additional Monitoring

- To supplement the semiannual monitoring Precision collected samples from the Trolley Track Seep in October 2023. Analytical results were received from TestAmerica Laboratories and validated. Summaries of the data are attached.

### **2. Description of all data anticipated, and activities scheduled for the next ninety (90) calendar days:**

- Operation of the treatment systems will continue at the site.
- Precision will sample the Lagoon and Seep Shed Treatment systems monthly in January February, and March 2024. Data is anticipated to be received four weeks after each sampling event.
- Semiannual monitoring of surface water is scheduled for January 2024.

### **3. Description of any problems encountered or anticipated:**

- None.

### **4. Any actions taken to prevent or mitigate such problems.**

- None.

### **5. A schedule for completion of such actions:**

- Containment and treatment of water in the lagoon will continue as needed.

- Operation of the Seep Shed treatment system will continue as needed.

## **6. Analytical data received during the reporting period:**

- Laboratory data for the semiannual groundwater, seep, and residential well samples collected in October 2023 were received from TestAmerica Laboratories and validated. Summaries of the data are attached.
- Laboratory data for the October 26, 2023 sampling of the Seep Shed Treatment System and the Lagoon Treatment System were received from TestAmerica Laboratories and validated. A summary of the data is attached.

Hexavalent chromium and total chromium were not detected above the laboratory method detection limit in the effluent of the Lagoon Treatment System.

Hexavalent chromium was not detected above the laboratory method detection limit in the effluent of the Seep Shed Treatment System. Total chromium was detected in the effluent at a concentration of 11.1 ug/L, which does not exceed the MCL of 100 ug/L.

- Laboratory data for the November 17, 2023 sampling of the Lagoon and Seep Shed Treatment Systems were received from TestAmerica Laboratories and validated. A summary of the data is attached.

Hexavalent chromium and total chromium were not detected above the laboratory method detection limit in the effluent of the Lagoon Treatment System.

Hexavalent chromium was not detected above the laboratory method detection limit in the effluent of the Seep Shed Treatment System. Total chromium was detected in the effluent at a concentration of 18.2 ug/L, which does not exceed the MCL of 100 ug/L.

- Laboratory data for the December 15, 2023 sampling of the Lagoon Treatment System and the Seep Shed Treatment System were received from TestAmerica Laboratories and validated. A summary of the data is attached.

Hexavalent chromium and total chromium were not detected above the laboratory method detection limits in the effluent of the Lagoon Treatment System.

Hexavalent chromium was not detected above the laboratory method detection limit in the effluent of the Seep Shed Treatment System. Total chromium was detected in the effluent at a concentration of 10.3 ug/L, which does not exceed the MCL of 100 ug/L.

## **7. Modifications to the response action, RAP, and schedule made in accordance with Section XIV of the Settlement Agreement during this reporting period.**

- None.

Ms. Ann DiDonato  
U.S. EPA  
January 30, 2025

If you have any questions or require additional information, please call me at 908.526.1000.

Sincerely,

Arcadis U.S., Inc.

## Data Validation Summary

Arcadis U.S., Inc. (Arcadis) performed a level III data validation evaluation of the analytical data collected during the Precision National Plating site investigation. The data evaluation was conducted in accordance with the United States Environmental Protection Agency's (USEPA) Data Validation Functional Guidelines for Evaluating Environmental Analyses, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," dated October 1999, and "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review," dated October 2004 ("the USEPA Guidance"). The following is a summary of the analytical data review for samples collected and analyzed from October through December 2022. The samples were submitted to TestAmerica Laboratories located in Edison, New Jersey for analysis. The TestAmerica sample delivery groups (SDGs) evaluated for this report include: 460-290487-1, 460-290564-1, 460-290655-1, 460-290739-1, 460-290800-1, 460-290968-1, 460-291055-1, 460-291145-1, 460-291145-1, 460-291239-1, 460-291240-1, 460-291241-1, 450-292857-1 and 460-294770-1.

The samples were analyzed using the following methods:

EPA Method 200.7 for metals

EPA Method 245.1 for mercury

EPA Method 7196A for hexavalent chromium

The data were evaluated based on the following parameters according to the USEPA Guidance for Level III data validation:

data completeness

holding times

blanks

duplicates and ICP serial dilution

matrix spike/matrix spike duplicate/post-digestion spike recoveries (MS/MSD/PDS)

laboratory control spike/laboratory control spike duplicate recoveries (LCS/LCSD)

A review of the laboratory reports revealed one issue which caused the data to be qualified. The laboratory indicated the percent recovery of hexavalent chromium in the matrix spike was higher than the acceptance criteria (139%) in analysis batch 460-939004 which included samples from PNP SDG 460-290564-1. The sample utilized for the matrix spike was PNP sample MW-40I (460-290564-1). The recovery was acceptable in the second matrix spike analyzed with the batch (460-290564-9, PNP sample MW-44S) and all other QA/QC parameters were in compliance. Therefore, only the hexavalent chromium result for sample 460-290564-1 (MW-40I) is qualified as estimated, biased high, based on the matrix spike recovery.

The sample temperature, hold times, calibrations, laboratory control samples, duplicates, serial dilutions, and all other laboratory blanks were all within compliance criteria for all samples.

The following items were noted during the data review:

The relative percent difference was high (22%) between the concentration of lead in the initial result and the duplicate sample analyzed along with metals batch 460-947406, which included samples from PNP SDG 460-292857-1. However, the concentrations of lead in the sample and the duplicate were less than and less than five times the method detection limit (MDL), so the criteria for comparison becomes the reporting limit. The difference in results is not greater than the reporting limit. The sample used for the duplicate analysis was not a PNP sample. All of the other QA/QC parameters were in compliance, so the lead results are not qualified.

In metals analysis batch 460-961013, the recovery of iron in the matrix spike analysis was lower than the acceptance criteria (-56%). However, the concentration of iron in the original sample was greater than

## Data Validation Summary

four times the spike amount, so the recovery acceptance criteria do not apply. Also, the recovery of aluminum in this same matrix spike was higher than acceptable (146%). The sample used for this matrix spike was not a PNP sample. The recoveries for a second matrix spike sample and the post-digestion spike analyzed with this batch were all acceptable, and all other QA/QC parameters were in compliance. Aluminum was not detected in the PNP samples analyzed in this batch. Therefore, the iron and aluminum results are not qualified following data validation.

### **Summary of Quality Assurance/Quality Control Evaluation of Data**

Based upon the QA/QC review, the project data are valid and available for use in site characterization with the following qualifications:

**Table 1**  
**Qualified Data Summary**

<b>Sample</b>	<b>Lab ID</b>	<b>SDG</b>	<b>Result</b>	<b>Qualified Result</b>
MW-40I	460-290564-1	460-290564-1	108 ug/L F1 (Cr+6)	108 ug/L F1J+ (Cr+6)

Notes:

Cr+6 = Hexavalent Chromium

ug/L = micrograms per liter

F1= method hold time exceeded

J+ = after validation, result is qualified as estimated, biased high

### Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

### Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter mg/L - milligrams

-- Sample not analyzed for this compound.

U - The reported value was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

**Wet Chem (mg/L)**

Sulfate  
Sulfide

ug/L - micrograms/liter mg/L - milligrams

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

Notes:

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

\* - Duplicate analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

### Metals ( $\mu\text{g/L}$ )

Chromium	692	66.3	7.7 J	10 U	11.2	54.7	393	93.8		10 U	72.9	22.9	151	10 U	11.1
Hexavalent Chromium	450	3.1 J	10 U	10 U	10 U	10 U	31.1	10 U							

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

B - The reported value is less than the Method Detection Limit but greater than or equal to the Instrument Detection Limit.

E - The reported value is estimated due to the presence of interference.

N - The spiked sample recovery was not within control limits.

W - Post digestion spike for Furnace Atomic Absorption analysis was not within control limits.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.

ug/L - micrograms/liter      mg/L - milligrams/liter

-- Sample not analyzed for this compound.

U - The compound was not detected at the indicated concentration.

J - After validation, the result is qualified as estimated (J+ biased high, J- biased low).

R - After validation, the result is qualified as rejected.
