**Hazardous Components**

These products may contain naturally occurring trace level minerals at concentration levels below HazCom 2012 and GHS Revision 3 hazard classification limits. Per XRC(M) analysis, which combines the analytical capabilities of Inductively Coupled Plasma Optical Emissions Spectrometry, X-Ray Diffraction, Computer Controlled Scanning

Electron Microscopy/Energy Dispersive Spectroscopy and Raman Spectroscopy to conduct particle-by-particle physicochemical/mineralogical analysis - naturally occurring trace level substances in these products are inextricably bound, environmentally unavailable and at de minimis concentrations. Thus, in accordance with the stated application, they are believed to be incapable of causing harm under normal conditions of use or in an extreme upset environment.

#### **Additional Information**

Per the XRD Rietveld Method, used to determine mixture components and content, there are no additional ingredients present at significant levels within these products and based on the best available information, any trace level impurities that might exist are not concentration levels triggering classification and hence, are not reportable within this section. Therefore, any and all trace level components have been excluded from reporting and classification as either a health or environmental hazard.
